INSPIRACE na cestách

global INSPIRATION

Roman Ulich

navrženo pro maximální funkčnost, jednoduchost linií a dominantní vzhled

designed to be maximally functional, with simplicity of contours and dominant look

**Stavby Mayů jsou nadčasové,
okouzlují elegancí a jednoduchostí tvarů,
které přetrvaly století a inspirují nás dodnes.**

Mayan structures are timeless, they charm
us with their elegance and their simple design,
that have endured centuries and still inspire us.

**TiN-B** titan braun mat

vyvinut speciálně jen pro řadu kování DESIGN 2009. Měnící se povrch přecházející přes spektrum hnědých odstínů a končící na hranách klik až u hluboké tmavé barvy lze jen těžko definovat. Pod různým úhlem, pod různým osvětlením, pod různou intenzitou se barva vždy mění ... jedno jí však zůstává – pořád je výjimečná.

TiN-B titanium braun mat

Surface developed exclusively for our new range of fittings DESIGN 2009. The surface changes its colour, oscillating from a spectre of shades of brown to hard-to-define deep dark colour on the handle edges. Viewed from different angles, under different illumination and in light of different intensity the colour shades keeps changing, however it never changes in one respect... it is always exceptional.

T0reRO je vždy elegantní – při každém pohybu, v každé situaci i když ostrý roh býka může každým okamžikem způsobit hlubokou ránu...

T0reRO is always elegant – in every movement, in every situation even when the bull's horns threaten to deal a fatal blow any second...

Barbra Škorpilová

**Nadčasová elegantní dřevěná klika, kterou je potěšení vzít do ruky.
Má elementární tvarování a přirozenou schopnost dobře stárnout s interiérem.**

Timeless and elegant wooden door handle.
With elementary shape and natural ability to age along with the interior.

NEJDŮLEŽITĚJŠÍ JE FUNKCE

THE MOST IMPORTANT THING ON FITTING IS ITS FUNCTION

systém dvojitých pružin s garantovanou životností 100 000x otevření

a system of double springs with guaranteed lifespan of a 100.000 openings

konstrukce prošroubování a zajištění rozebíratelným gelem proti samovolnému uvolnění

a system of screws and use of demountable gel preventing spontaneous loosening

pružiny zapouzdřeny v plastových naváděcích drážkách pro velmi tichý chod kování

...the springs are encased in plastic guiding grooves for extremely silent functioning

zajišťovací červík s nosem, který roztáhne a pevně fixuje funkční čtyřhran

a set screw tightly fixes the functional axis of the handle

nálitky a pouzdra proti pootáčení rozet a následně celého kování

casings prevent rosettes and fittings from rotating

patentovaný systém prokluzu, který zabraňuje přílišnému dotažení rozet a tím zamezí popraskání dýhy dveří (dotažovaný šroub se začne na druhé straně dveří pootáčet)

a patented slip system preventing the rosettes from being over-tightened and thus preventing the door coating from cracking (tightened screw starts to slide-turn on the other side of the door)

konstrukce navlakacích rozet s přesností 0,05mm bez možnosti samovolného uvolnění

...construction of click-on rosettes with pinpoint accuracy of 0,05 mm without a chance of spontaneous loosening

trojnásobná fixace funkčního čtyřhranu zamezující hýbání kliky

...triple fixation of the functional axis of the handle prevents its loosening
